Professional Summary

Full Stack Web Developer specializing in end-to-end applications and cloud-based solutions. Experienced in building responsive React interfaces, implementing authentication and state management, integrating RESTful APIs, and developing Node.js back ends. Adaptable and collaborative, with experience working with product and design teams and independently learning new technologies such as Vue.js.

Work Experience

Upflairs Pvt. Ltd. | Full Stack Web Developer

- Built and shipped responsive, user-facing features with React and JavaScript, improving application responsiveness and user engagement.
- Implemented authentication and state management features that strengthened application security and improved the user experience.
- Integrated and tested RESTful APIs to connect frontend and backend systems, reducing data retrieval time by 20%.
- Maintained version control using Git/GitHub, ensuring smooth collaboration and codebase integrity.
- Explored and applied Vue.js independently to develop modular UI elements, demonstrating adaptability and continuous learning.
- Collaborated with designers and product teams to define feature requirements and deliver enhancements across a JavaScript and TypeScript codebase, resulting in a smoother user experience.

DevOps And Cloud Computing Intern

- Implemented cloud and deployment technologies including Linux, Docker, Jenkins, AWS, Kubernetes, Ansible, Terraform, Bash, and YAML to streamline deployment processes and reduce setup time.
- Gained hands-on experience with automation, CI/CD pipelines, cloud deployment, container orchestration, and integration management across development and operations environments.
- Partnered with development and product teams to implement cloud-based solutions, aligning deployments with project goals and improving team coordination.

PROJECTS

AI Figure Generator for Scientists

- Developed a web application that generates biology diagrams from text prompts using React, Node.js, and OpenAI/Gemini APIs, enabling scientists to quickly create accurate visual figures.
- Implemented user authentication, project saving, and version history, and optimized API usage to reduce latency and improve reliability for real-time figure generation.

Real-Time Disaster Alerts Dashboard

- Built a map-based dashboard using React, Leaflet, and D3.js to visualize live disaster risk scores and alerts from multiple external APIs.
- Designed a FastAPI backend that aggregates and normalizes data streams, improving response time and providing reliable, real-time risk assessments for end users.

Cloud-Native Hosting Control Panel

- Implemented a multi-tenant web hosting control panel on AWS using EC2, RDS, S3, and Lambda, allowing users to deploy and manage websites through a secure web interface.
- Added role-based access control, resource monitoring, and automated backup workflows, improving platform reliability and making deployments easier to manage.

Team Task & Deployment Manager

- Created a full-stack application that integrates CI/CD status from Jenkins, Docker, and Kubernetes APIs with project task management and real-time notifications.
- Developed analytics dashboards to track deployment frequency, failure rate, and task completion metrics, helping teams improve release reliability and coordination.

Skills

- **Programming Languages:** Java, Python, C/C++, JavaScript, SQL, TypeScript
- **Frameworks:** React, Node.js, RESTful APIs, JSwing, Python Tkinter, Flask, Express.js, FastAPI
- **Cloud & DevOps Tools:** AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Jenkins, Ansible, Terraform, BASH, YAML
- **Developer Tools:** Git, GitHub, VS Code, IntelliJ IDEA, Cursor, Postman

Education

PIET | B.Tech, Data Science (GPA: 8.54)

Jaipur, Rajasthan 2022 - Jun 2026
